

Naturesactiv Global

Advancing Animal Health with Phytogenic
Solutions for Safe and Sustainable Food.

In Feed-Application

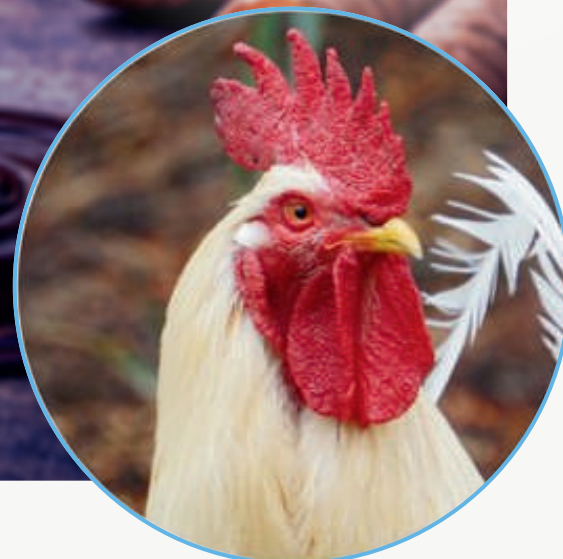

Naturesactiv®

Enercept Functional Oil™

**Turmerone-Based Nutritional Support
for Gut Efficiency in Poultry**

Liquid Feed Additive

Key Benefits:

Supports Gut Stability and Nutrient Utilization:

Helps maintain efficient nutrient absorption during production stress.

Supports Consistent Feed Conversion:

Helps maintain feed utilization and growth uniformity across the flock.

Supports Gut Balance During Nutritional Stress:

Helps maintain digestive balance when gut efficiency is affected.

"Packaging displayed is for illustration purposes only. Final packaging and labeling may vary in accordance with country-specific regulatory requirements."

Recommended Dosage:

500 g/tonne of feed

Use under the guidance of an animal nutritionist

Available Sizes: 25 KG

Product Overview:

Enercept™ Functional Oil is a turmerone-based nutritional formulation designed to support gut stability and nutrient utilization in poultry. It helps maintain digestive balance and consistent feed conversion, supporting uniform flock performance during production stress. It also supports uniform feed coating characteristics, with a distinct golden-yellow color and characteristic olfactory profile associated with the formulation.

TriGut™

Natural Bioactive Gut Health Solution for Poultry

Powder Feed Additive

Key Benefits:

Supports Gut Function Across the Foregut, Midgut, and Hindgut:

Supports digestive activity and nutrient absorption across all intestinal sections.

Supports Feed Efficiency (FCR):

Supports consistent feed utilization and performance when used as a feed additive.

Supports Droppings Consistency and Gut Balance:

Helps maintain normal droppings consistency and overall digestive balance.

Recommended Dosage:

200 g/tonne of feed

Use under the guidance of an animal nutritionist

Available Sizes Powder: 25 KG

"Packaging displayed is for illustration purposes only. Final packaging and labeling may vary in accordance with country-specific regulatory requirements."

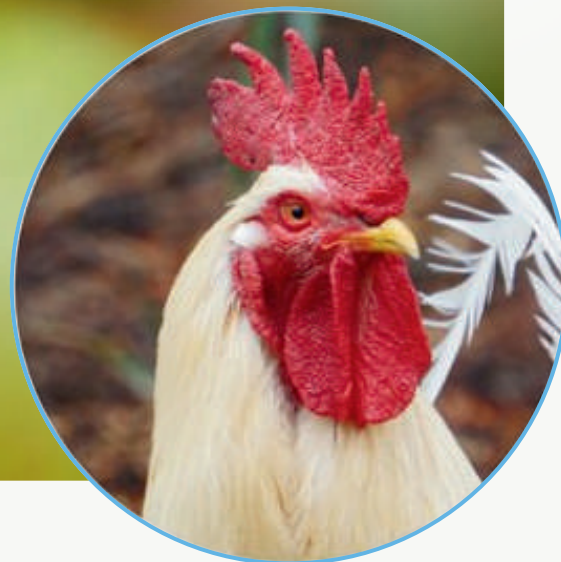

Product Overview:

TriGut™ is a phytogenic formulation derived from garlic essential oil, designed to support gut function across the foregut, midgut, and hindgut. It helps support digestive activity and nutrient absorption, contributing to consistent feed utilization and overall gut balance in poultry. It also helps maintain a balanced gut environment, supporting birds during periods of nutritional and environmental stress.

Stress Stabilizer with Antioxidant Support for Poultry

Powder Feed Additive

Key Benefits:

Supports Birds During Routine Production Stress:

Helps birds cope with heat, vaccination, density, and feed-related stress conditions.

Supports Antioxidant Activity and Oxidative Balance:

Helps neutralize reactive oxygen species (ROS) and supports cellular stability.

Supports Feed Intake and Flock Uniformity:

Helps maintain consistent feed intake and overall flock performance.

Recommended Dosage:

200 g/tonne of feed

Use under the guidance of an animal nutritionist

Available Pack Sizes: 25 KG

"Packaging displayed is for illustration purposes only. Final packaging and labeling may vary in accordance with country-specific regulatory requirements."

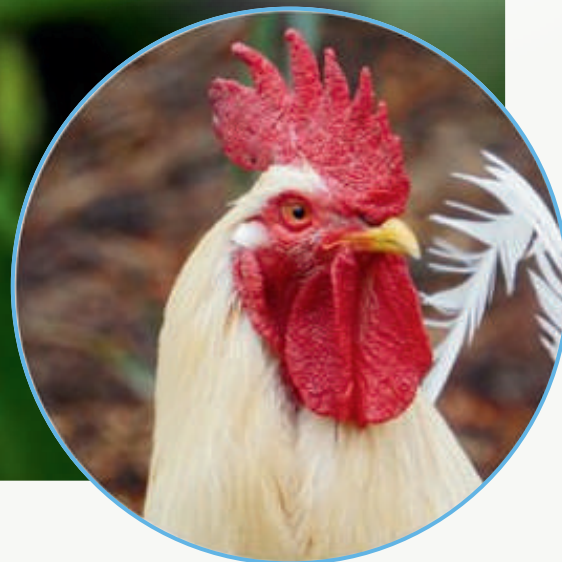

Product Overview:

Adaptix™ is an antioxidant-based nutritional formulation designed to support birds during routine production stress. Stress conditions can increase the formation of reactive oxygen species (ROS), which may impact gut function and feed intake. Adaptix™ helps support the neutralization of free radicals and maintain oxidative balance, contributing to gut integrity and biological stability. This supports consistent feed intake, efficient nutrient utilization, and flock uniformity during stress conditions.

HepatoShift™

Hepato-Pro Nutrient for Liver Metabolic Support in Poultry

Powder Feed Additive

Key Benefits:

**Supports Liver Function During
Metabolic and Nutritional Stress:**

Helps birds manage detoxification load from
feed-related challenges and rapid growth.

**Supports Fat Digestion and Nutrient
Utilization:**

Helps maintain bile function and efficient
digestion of dietary fats.

**Supports Flock Uniformity and Litter
Condition:**

Helps maintain consistent growth and
normal droppings consistency.

"Packaging displayed is for illustration purposes only. Final packaging and
labeling may vary in accordance with country-specific regulatory requirements."

Recommended Dosage:

500 g/tonne of feed

Use under the guidance of an animal nutritionist

Product Overview:

HepatoShift™ is a phytogenic formulation designed to support liver metabolism during production stress. It helps maintain bile function, nutrient utilization, and digestive balance, supporting flock uniformity and overall performance in poultry.

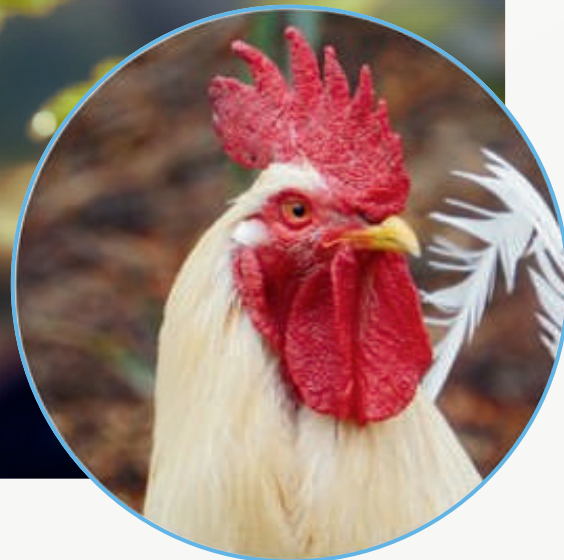

Available Pack Sizes: 25 KG

Lay Activ™

NUTRITIONAL SUPPORT FOR EGG QUALITY AND PRODUCTION STABILITY IN LAYERS

Powder Feed Additive

Key Benefits:

Supports Egg Formation During Metabolic Stress:

Supports reproductive tissue function involved in albumin and shell formation.

Supports Eggshell Strength and Albumin Quality:

Helps maintain shell integrity and albumin consistency during production.

Supports Egg Uniformity and Production Stability:

Helps maintain consistency in egg size, quality, and output.

Recommended Dosage:

250 g/tonne of feed

Use under the guidance of an animal nutritionist

Available Pack Sizes: 25 KG only

"Packaging displayed is for illustration purposes only. Final packaging and labeling may vary in accordance with country-specific regulatory requirements."

Product Overview:

Lay Activ™ is a nutritional formulation designed to support egg formation during periods of metabolic stress. Stress conditions may influence the tissues responsible for albumin and shell formation, affecting egg quality and consistency. Lay Activ™ supports these biological functions, helping maintain shell integrity, albumin quality, and overall production stability in laying birds.

In Water-Application

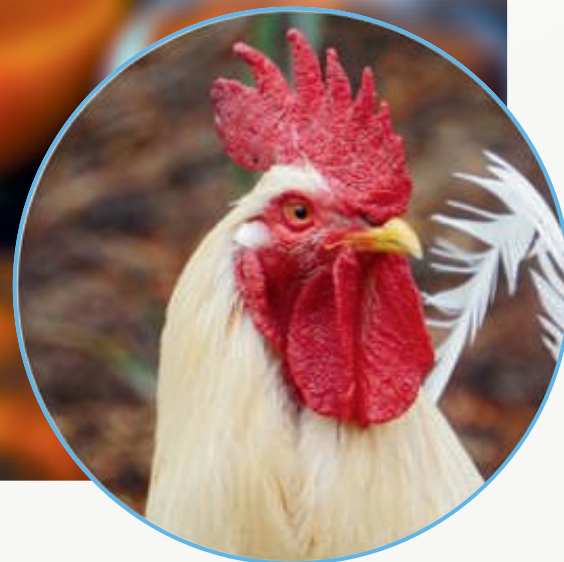

Naturesactiv®

Enercept Aquasol™

Water-Based Nutritional Support During Stress for Poultry

Liquid Water Additive

Key Benefits:

Supports Birds During Environmental and Production Stress:

Helps maintain metabolic balance during heat, environmental, and production stress conditions.

Supports Nutrient Utilization During Reduced Feed Intake:

Helps maintain nutrient use when feed intake declines and energy shifts toward maintenance.

Supports Consistent Performance and Flock Uniformity:

Helps maintain growth consistency during stress periods.

Recommended Dosage:

0.5 – 1.5 ml per litre of drinking water

Use under the guidance of an animal nutritionist

Available Pack Sizes: 5L & 25L

"Packaging displayed is for illustration purposes only. Final packaging and labeling may vary in accordance with country-specific regulatory requirements."

Product Overview:

Enercept™ Aquasol is a water-based formulation designed to support birds during periods of stress when feed intake declines. Under stress conditions, nutrient utilization may shift away from productive performance, affecting growth and flock uniformity. Enercept™ Aquasol supports metabolic balance and nutrient utilization through water intake, helping maintain consistency in growth and overall flock performance during stress conditions.
